Séminaire invité du CRTI/ITUN
Dr Matthew GRIFFIN
Regenerative Medicine Institute (REMEDI), School of Medicine, National University of Ireland Galway

Mardi 28 avril 2020 à 11H
« Understanding and targeting abnormal inflammation in chronic kidney disease »

Invité par le Dr Sophie Brouard

I have been Professor of Transplant Biology at the National University of Ireland Galway’s School of Medicine and a Consultant Nephrologist at Galway University Hospitals since July 2008. Between 1997 and 2008, I pursued a research fellowship in basic immunology in the laboratory of Jeffrey Bluestone at The University of Chicago and was a faculty member of the Division of Nephrology and Hypertension and the William J von Liebig Transplant Center at Mayo Clinic in the United States. My research interests include basic and transplant immunology, the pathophysiology of kidney disease and stem cell and regenerative therapies. To date, I have authored over 160 peer-reviewed manuscripts and have been primary supervisor to over 50 postgraduate students and postdoctoral researchers, many of whom are now academic clinicians and scientists. I am also a practicing nephrologist in the Renal Department of Saolta University Healthcare Group serving the West/Northwest of Ireland.
